     The coatings comprise, from the substrate surface, a Zn-rich paint, a
AB
     synthetic resin base coating, an intermediate coating containing hydrolyzable
     silyl group-containing vinyl polymers (I), hydrolyzed organosilanes (II) or
     their partially condensates and pigments, and a top coating containing I, II
     or solvent-soluble fluoropolymers, and TiO2 photocatalysts
     in an amount so that the PWC (pigment weight concentration) reaches 45-85%.
The
     coatings show high NOx-removing activity and excellent antifouling
     property. Thus, an intermediate coating was obtained from a 55%-solids
     copolymer of iso-Bu methacrylate, 2-ethylhexyl methacrylate and
     CH2:CMeCO2(CH2)3Si(OMe)3, 100, TiO2 25, CaCO3 15, BaSO4 10 parts and Bu2Sn
     laurate. A top coating was obtained from a hydrolytic polycondensate of
     MeSi(OEt)4 100, SSP 25 (photocatalyst TiO2) 160, xylol 10,
     iso-Pr alc. 10 parts, and Bu2Sn laurate. Coating pre-blasted steel plate
     with a Zn-rich paint (Zn concentration 70%), a basecoat containing Epikote
     828-Tohmide 245 copolymer, the intermediate coating, and the top coating
     gave a coated steel showing good resistance to salt spray and weather and
     NOx-removing ability.

     The invention relates to a radiog. image converter panel comprising a
AB
     photostimulable phosphor-containing layer, wherein the protective
     layer is made of the polysiloxane segment-containing fluoropolymer
     in which the fluorine content is \geq 30% and the polystyrene-based
     number average mol. weight is ≥5000, for enhancing the scratch prevention and
     antifouling properties.

     The title compns. comprise the following components (A)-(D), with the C
AB
     content 5-80% based on overall solids in the composition: (A) a partial
     hydrolyzate of average composition formula R2aSiOb(OR1)c(OH)d (R1, R2 =
     hydrocarbyl; a, b, c, d = nos. satisfying a + 2b + c + d = 4, 0 \le a
     < 3; 0 < b < 2; 0 < c < 4; 0 < d < 4) and having Mw 600-5,000
     (polystyrene-equivalent), (B) a nonionic surfactant or an anionic surfactant,
     (C) a photosemiconductor, and (D) water. A reactive terminal
     silanol group-containing polysiloxane 50% solution in toluene was prepared from
     methyltrichlorosilane 44.8, dimethyldichlorosilane 38.7, and
```

.

```
phenyltrichlorosilane 84.6 parts, and the solution (100 parts) was mixed with
     5 parts methyltrimethoxysilane and 5 parts dimethyldimethoxysilane and
    treated dropwise under stirring at 60° with a solution from 0.6 part
    dibutyltin dilaurate and 10 parts toluene, further stirred for 40 min, and
    concentrated to obtain a 80%-solids solution of desired partial hydrolyzate of
           The above solution (50 parts) was treated with 2 parts polyethylene
    glycol nonylphenyl ether as polymerization initiator, concentrated in vacuo
under
    stirring, stirred with 5 parts polyethylene glycol nonylphenyl ether,
    stirred with 290 parts water, homogenized, and mixed with 10 parts titania
    aqueous dispersion to obtain a coating composition
    polysiloxane silsesquioxane antifouling coating titania
    photosemiconductor
